

Lecture 06 : Metacognitive Feelings : Origins of Mind

Stephen A. Butterfill & Richard Moore

< >

Monday, 15th February 2021

Contents

1	Core Knowledge of Objects	2
2	The CLSTX Hypothesis: Object Indexes Underpin Infants' Abilities	2
3	Motor Representation in Object Cognition	2
4	What Can Object Indexes Explain	2
5	Metacognitive Feelings Connect Object Indexes to Looking Behaviours	2
6	Conclusion on Metacognitive Feelings and Knowledge of Objects	2

1. Core Knowledge of Objects

Lecturer: Stephen A. Butterfill

What is core knowledge? Why do we need a notion of core knowledge?
What is its relation to knowledge?

2. The CLSTX Hypothesis: Object Indexes Underpin Infants' Abilities

Lecturer: Stephen A. Butterfill

How do four- and five-month-olds track briefly occluded objects? One hypothesis is that their abilities to do so depend on a system of object indexes like that which underpins multiple object tracking or object-specific preview benefits.

3. Motor Representation in Object Cognition

Lecturer: Stephen A. Butterfill

4. What Can Object Indexes Explain

Lecturer: Stephen A. Butterfill

5. Metacognitive Feelings Connect Object Indexes to Looking Behaviours

Lecturer: Stephen A. Butterfill

What links the operations of object indexes to facts about what is novel or strange to an infant? Not beliefs but metacognitive feelings.

6. Conclusion on Metacognitive Feelings and Knowledge of Objects

Lecturer: Stephen A. Butterfill
